

DX-100i

DESCRIPTION

The DX-100i are DSP processing amplifiers that offer the same power outputs as the DX-100. The DX-100i accepts analogue, AES3 digital and optional Dante networked audio.

The DX-100i can connect to any source and make it available over the network, as well as processing four additional channels with local analogue outputs to connect to non-DSP DX Series amplifiers. These auxiliary processed outputs can also be fed onto the network, and used by non-DSP DX amplifiers that have Dante cards fitted, or by any other Dante enabled device.

Connectivity for remote control is covered by USB, Ethernet and RS485, with relay of either USB or Ethernet control via RS485 to work with legacy products.
